K2 customise your conservatory

K2 aluminium, the heritage solution

PVC-u conservatories could well be refused if you live in a heritage home / listed building.

Timber is one alternative often considered, particularly for the frame. However, if the upkeep of timber is off-putting and its natural movement over time represents too much of an uncertainty, aluminium is the perfect solution.

The K2 aluminium roof, which can also feature a sculpted aluminium gutter, is our first choice for most architects / specifiers, and features on many listed building projects.

Choosing a conservatory involves selecting its shape, size, and colour. Few people are aware that you can also decide on the material used for the exterior of the roof.

In the last few years homeowners wanting to invest in a product with more added value have been opting for aluminium as an alternative to PVC-U.

The high-gloss, powder coated finish, available in any RAL colour, provides added weathering, and the matching aluminium end-caps add an important finishing touch. The large aluminium ball finial is a particularly striking addition, and has proven extremely popular.

Overall the aluminium finish is a premium product, offering you the opportunity to add more value to your investment.

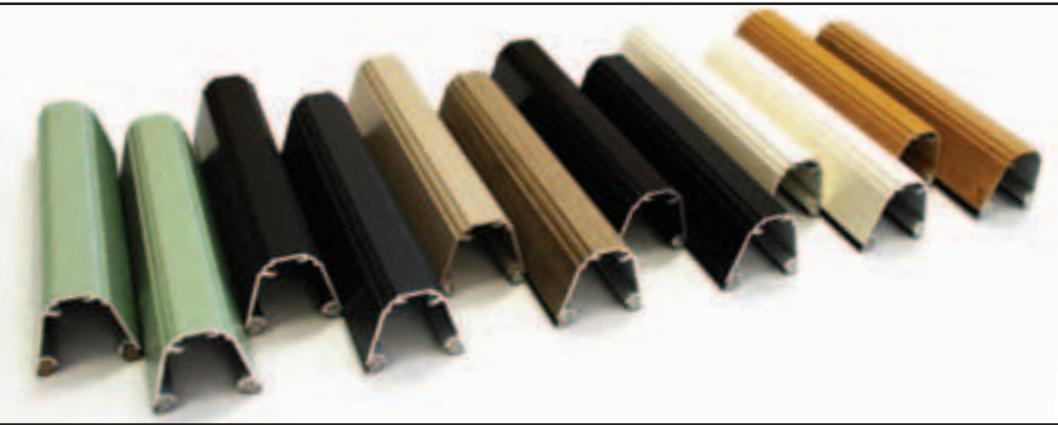

the aluminium roof system

colours

With a K2 aluminium roof homeowners can choose from an array of foil colours, or a high gloss powder-coating in any RAL colour. So whether you want a perfect match to your house or are looking for something a little different, a K2 aluminium roof is the solution.

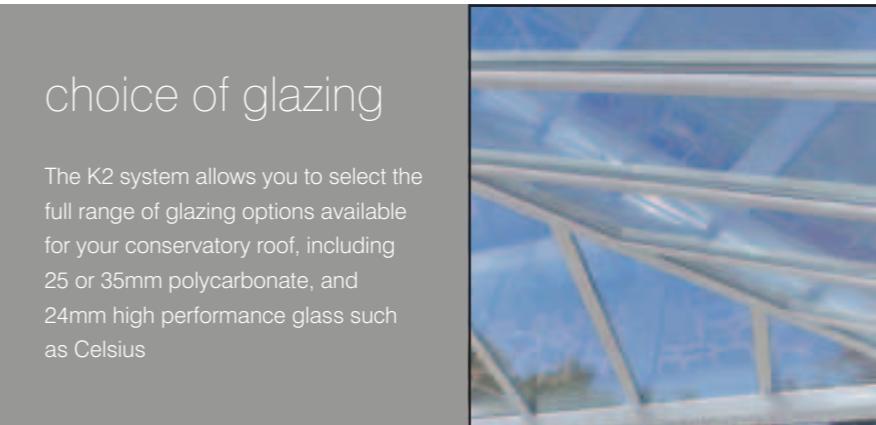

high quality aluminium castings

You can choose to dress your K2 aluminium roof with our ball finial and/or decorative cresting, (for the more traditional look) to fit in with your house style. For a contemporary look a no cresting option is best, and in some cases you might also wish to remove the finial.

range of gutter options

For the perfect finish opt for an aluminium gutter to go with your aluminium roof. Also powder coated to match, it will be bespoke to your conservatory to give it its unique and exclusive appearance.

choice of glazing

The K2 system allows you to select the full range of glazing options available for your conservatory roof, including 25 or 35mm polycarbonate, and 24mm high performance glass such as Celsius

thermal bridging

The aluminium top cap is thermally isolated from its aluminium core in order to provide you with maximum protection against temperature fluctuation.

- Allowed on heritage / listed buildings
- Highly durable, aluminium is made to last
- Longer lasting colour
- Can be colour matched to fit any property
- Easier to maintain
- No condensation on bars
